A Simple LaTeX Document

Abstract

We're going to learn how to write simple LaTeX code in this session after going through a brief history of the program. We will use an editor called Texmaker and `texlive` packages installed on a Linux distribution. Some users might feel at ease witing *code* in their preferred editor; for this purpose we will use Visual Studio Code.

I would recommend using openSUSE Tumbleweed but attendees are free to spin up their own favorite distro for this session.
